

Policy on Greenhouse Gas Management

TQM Alpha Public Company Limited

TQM Alpha Public Company Limited and group operate with integrity and are committed to responsibility towards all stakeholders for sustainable mutual benefits. Therefore, we have established a sustainable development policy based on internationally recognized operational guidelines that encompass economic, social, and environmental aspects under good corporate governance principles. This ensures consistent alignment across all business operations to address global climate change challenges.

The problem of global warming and increasingly severe climate change is a crucial and urgent factor that requires cooperation from all parties to reduce greenhouse gas emissions, as agreed upon by various government agencies and private sector, including the Stock Exchange of Thailand and the Securities and Exchange Commission (SEC). TQM Alpha Public Company Limited and the group of companies are aware of and committed to fostering cooperation and supporting various activities aimed at mitigating global warming to the fullest extent possible. The following are the guidelines for achieving this goal:

1. Adjust processes and equipment to be more energy-efficient.
2. Promote the use of alternative energy sources to reduce the use of natural resources.
3. Organize activities to raise awareness about energy conservation and climate change adaptation for the board of directors, executives, employees, and business partners.
4. Collaborate in reforestation and restoration of forest areas to serve as carbon dioxide absorption sources.
5. Promote and advocate for the collection and proper management of waste for recycling and reuse.
6. Monitor the climate change trends, particularly the risks that may impact the TQM group.
7. Create awareness and enhance knowledge about climate change among employees of TQM Alpha Limited (public company) and its business partners and stakeholders.

With such intention and dedication, the TQM Group of Companies hopes to be part of the collective effort to address the pressing issues of global warming and escalating climate change.
